Report for Langvella

The following document with appendices provides information and data from exploration work completed by Kuniko Norge AS on the Langvella license blocks listed below:

- 0427/2022 Langvella 3
- 0431/2022 Langvella 7
- 0432/2022 Langvella 8
- 0433/2022 Langvella 9
- 0422/2022 Langvella 16
- 0423/2022 Langvella 17
- 0424/2022 Langvella 18
- 0425/2022 Langvella 19

In 2023, 66 rock samples were collected and further 79 samples were collected in 2024. Samples were taken from outcrop and spoil tips using hand tools (i.e. Hammer). Rocks collected in 2023 were analyzed by ALS using ME-MS61r to add REE determinations. Rock samples collected in 2024 were analyzed by the ALS methods ME-ICP06 and ME-MS81 which are both total methods meaning that the chemical analyses are reported after total dissolution of the rock samples and that these data are suitable for lithogeochemical work.

Appendices:

- A- Rock samples location map
- B- 2023 Rock samples metadata and assays
- C- 2024 Rock samples metadata and assays

Any questions can be directed at Exploration Geologist Ida Kronsell
